## Translation of the original instructions

- According to IEC/EN 61810-1
- Manual operation possible
- Contact position indication via control lever
- Max. 4 NC contacts, 4 NO contacts
- Width 45 mm

## Product Description

The bistable function of the AD 8851 latching relay is realised by two hinged armature magnet systems that interlock with each other. The relay has a solid torsion-resistant mounting frame that supports both magnet systems and the common contact block, allowing the relay to withstand even the toughest mechanical loads.
On all types, a switch lever located on the front panel allows manual magnet system adjustment and indicates the magnet or contact position.

## Approvals and Markings

## Application

Interlocking of control circuits

## Function

The relay will be actuated by impulse or continuous energizing of the coils A1-A2 or B1-B2. During the energizing of both systems at the same time, the interlocking is disabled; the contact position corresponds with the energizing of the coil A1-A2.

All contacts are on the same magnetic system, which is connected on A1, A2. Thus it is achieved, that in case of energizing of both systems at the same time, there will be no undefined contact condition.

## Connection Terminals

| Terminal Designation | Signal description |
| :--- | :--- |
| A1 / A2; B1 / B2 | Control signal AC <br> Control signal DC (polarity selectable) |
| $11,12,14 ; 21,22,24 ;$ <br> $31,32,34 ; 41,42,44$ | Changeover contact LOAD |
| 13,$14 ; 23,24 ; 33,34 ; 43,44$ | NO contacts LOAD |
| 51,$52 ; 61,62 ; 71,72 ; 81,82$ | NC contacts LOAD |

AD 8851.19 / AD 8851.18 (without 81-82; 43-44)
AD 8851.17 (without 81-82; 71-72; 43-44; 33-34)
The Circuit Diagrams have been provided with star-Marking.
If the coil, provided with the star will be energized, the contacts, provided with the star, are closed.

coil B1-B2
